

CARING FOR A PERSON WITH COVID-19 FACTSHEET

SEQUENCE FOR PUTTING ON AND REMOVING PERSONAL PROTECTIVE EQUIPMENT (PPE)

Important Points to Remember:

- PPE must be put on correctly before entering the room of a person with COVID-19.
- PPE must stay on and be worn correctly when working in a contaminated area.
- Do not adjust PPE while completing care. (Example: adjusting face mask, retying a gown).
- Remove PPE slowly in a sequence that prevents self-contamination.
- Use safe work practices to limit the spread of contamination.
 - Keep hands away from the face.
 - Limit surfaces touched.
 - Change gloves when torn or heavily contaminated.
 - Wash hands using soap and water, or use an alcohol based hand sanitizer (60% alcohol content or higher).

Procedure for putting on PPE before entering the room of someone with COVID-19:

- Gather the proper PPE needed.
 - Face shield or goggles (Goggles provide protection for eyes, but might fog easily.)
 - N-95 respirator, or face mask (if N-95 respirator not available)
 - Clean, non-sterile gloves
 - Isolation gown (Select appropriate size.)
- Wash hands using soap and water, or use alcohol based hand sanitizer.
- Put on isolation gown, tying all areas of the gown.
- If available, put on an N-95 filtering face piece respirator.
 - Position respirator straps at the crown of the head and the back of the neck.
 - Use both hands to position nosepiece; do not pinch the nosepiece with one hand.
 - Ensure mask covers mouth, nose and under chin.
- If N-95 respirator is not available, put on face mask.
 - If mask has ties, ensure top tie is secured at top of head and bottom tie is secured at base of neck.
 - If face mask has loops, ensure loops are secured properly around ears.
- Put on face shield or goggles.
 - Face shields cover entire face.
- Wash hands and put on gloves.
 - Ensure gloves cover cuffs at wrists of isolation gown.

Procedure for removing PPE *before* exiting room of person with COVID-19:

- Remove gloves properly to ensure contamination of hands does not occur.
 - Use gloved hand to grasp palm area of glove on other hand and remove glove.
 - Hold removed glove in gloved hand.
 - Slide fingers of ungloved hand under wrist of glove on gloved hand and remove glove so that it covers first glove.
 - Discard gloves in trash bin.
- Gently remove gown. (Forceful removal of gown might promote contamination.)
 - Untie all ties; ensure sleeves do not make contact with body when reaching for ties.
 - Reach inside gown and gently pull gown away from neck and shoulders of body.
 - Discard gown in trash bin.
- Wash hands with soap and water, or use alcohol based hand sanitizer.
- Remove goggles or face shield by grabbing strap and pulling upwards from head.
 - Do not touch front of face shield or goggles.
- Carefully remove N-95 respirator or face mask.
 - Do not touch front of N-95 respirator or face mask.
 - Remove N-95 respirator by gently bringing straps over top of head and pulling N-95 respirator away from face.
 - Remove face mask by gently untying or unhooking straps and pulling mask away from face.
 - Discard N-95 respirator or face mask in trash bin.
- Wash hands with soap and water, or use alcohol based hand sanitizer.
